
OCPI 3.0 Documentation Overview

Documentation version: review2

This is the OCPI 3.0 documentation; it consists of the following documents:

Introduction

This document introduces OCPI, the terms and its abbreviations; it has sections on architecture, topologies, security, privacy and data retention.

Business Use Cases

This document contains all the OCPI 3.0 business use cases. These use cases explain what OCPI is designed to do.

Functional Use Cases

This document contains the structure of the messages exchanged when using OCPI, and the preconditions and postconditions for operations involving these messages.

It describes how data is transported, request/response formats and all the different Modules supported by OCPI. It contains all the interfaces, objects, class and datatypes definitions.

OpenAPI (Swagger) files

Implementers can use the OpenAPI files to generate OCPI boiler plating. This saves a lot of typing and development work.

As of review2, the Swagger files are not available yet.
